

Table of contents

Don't put "let's delve into the milky way",

You also can't "delve into the milky way" when you're exploring other galaxies

Could you have a heading for stars, then for other stuff? Like two headings

Page 2

Please explain the diagram, it can't be assumed knowledge, or just remove the diagram cause it's too complicated, the current description raises more questions than answers

Also the formatting is cutting into the image, the boxes are all not quite right, and it just needs cleaning

Text is cut off by the image

Page 4

is there any space to discuss the letter characterisation? O, A, B history-

Page 6

At some point we should relate colour and temperature more concretely

Page 7

Vibes

Page 8

Page 13

No comma after 'surfaces'

Page 14

The Sun text is still there in between earth and the white dwarf on the scale, but there's no image, so remove.

Page 22

'Devices like LIGO act like really precise rulers so. we can detect when a gravitational wave passes through us.' -by 'us', do they mean us as people or us as planet Earth? maybe a little unclear on LIGO

All of the titles are on the page on the right side, not on the left, which is the page you would read first should you put this page in front of the other one? Feel like it makes more sense

Page 24

There is no title that mentions anything about wavelength/light/radio waves to introduce the topic infrared description seems misleading, you can't just magically see exoplanets with it

Page 25

For the design, the first block of text "the milky way is..." could be moved higher while the scale of the ordinary matter to dark matter can be moved below for better aesthetics

Page 26

could you include the name of black hole and spiral arms? (Orion, ect.)

Where it says 'the milky way have 4 spiral arms', curve the text to match the curve

Page 27

Don't bold CLOUDS OF DUST, change last sentence to "the results can build realistic galaxies"

- "The results can simulate realistic galaxies with a high degree of accuracy"

Page 28

First two websites does not work - "page does not exit", however first website seem to work for other people

Maybe change the bibliography format, crediting the author and year/date ?
