

ASTRAL booklet feedback

- general
 - if its a new topic, title should be on left hand side
 - when using information specific to certain picture, the images and pictures should be linked using techniques seen on pages 16 and 17
 - font size consistency (specifically page 13)
- different font on pg 2 in the credits
- Pg 12 to 14
 - Don't have timeline and fate of the star
 - Bottom where it says sun and red giant is empty
- pg 13
 - i think that the square picture box could be slimmed as it looks inconsistent to the circle lines
 - Font size in the bottom right corner is inconsistent
- Pg 16 and 17
 - Same heading on both pages
- pg 18
 - formatting of paragraphs is different
 - pictures contrast each other and look jarring
 - font size is inconsistent to the rest of the booklet
 - image could be higher resolution
 - title should be on left hand side as well
 - words should be highlighted with a change in size and capitalisation like on previous pages
- pg 19
 - "allowing gravity pushing inward to overpower it"
- pg 20 and 21
 - missing space between pulsars and magnetars
 - info table on pg 21 should be the same as pg 14
 - I think that the small font size may be slightly too small
 - pg 20 maybe using scale (like on page 25) or a visual representation to show how the mass of neutron stars and the sun compare
 - Needs to be more detailed "Pulsars are most easily found using radio waves, and can be used as clocks"
 - Needs a picture of neutron star
- pg 22 and 23
 - paragraph formatting is inconsistent
 - words should be highlighted with a change in size and capitalisation like on previous pages
 - paragraph 2 on pg 23 should be all in line
 - Awkward phrasing
- pg 25
 - things should have more spacing between them, particularly at the top of the page
- pg 26 and 27
 - pg 26 the slight curve on the white line makes it look slightly messy
 - pg 27 use same font sizing
