

Page 1

-

Page 2

- Change the font or the sizing of the credits paragraph. The naming section went well but the paragraph on credits could use a change in size or font, it seems to degrade the overall quality of the document and other well-made elements

Page 10

- No context on what $M_{\odot}$, $R_{\odot}$ and $L_{\odot}$ mean in the statistics for the stars. (maybe move glossary information necessary to understand the pages up)

Page 11

- Pls align everything like centre everything
- Do correct rounding for element atomic mass
-

Page 12

- Upper bound for lifespan of G-type stars is usually cited to be lower, **12-15** billion years instead of **20** billion years (see [here](#) and [here](#) with mass of G9V star $0.90M_{\odot}$)

Page 13

- Format Fate of star better as you cant tell where it should be
 - Add what a corona is or where it is
 - Swap the elements created and the fun fact of the corona to make it easier to read. Then centre the Lifecycle and fate of star headers to the middle of the star shapes. Make the font slightly smaller for fate of the star and lifecycle maybe.

Page 14

M. R. and L. should be explained before the main material is given as it would be unclear what they represent to someone who has never seen them before. "They live upwards of 100 billion years" could be removed as its already mentioned in its table of info. Image could be clearer in which subject of the images is Proxima Centauri.

Page 15

- Percentage of Red dwarfs off Gaia data is missing on the graph
- Life cycle is missing
 - Protostar
 - Red Dwarf

- Fate Of star needs to be fixed
- The Fun Fact is Basic
Red Dwarfs last for trillions of years, Over 1000 times more than the lifespan of the sun
The Closest star to us, Proxima Centauri, is a Red Dwarf
- Explain the the more magnitude the less brightness

Page 16

- Source is not aligned properly
Cropped to the right
- Source has 2 collins
- "Elements found" is not aligned properly
- " 10^7 to 10^{10} years is not aligned properly
- "Sun" & "Red Giant" is not accompanied with sized circles
- Carbons rounding is incorrect
Should be 12.01 not 12.00
- irons element number is incorrect
should be 26 not 56
- Temperature is written in the wrong order
should be 3000-5000 K
- Luminosity of red Giant is not accurate
should be $\sim 3500L$
- Round rectangle corners for the source: European Southern Observatory
- Lifespan should use a hyphen to compute continuity
Should be 10^7 - 10^{10} years

- Elements under “elements found” are not aligned to the Elements found text
- Page numbers are too close to the margins of the page & will be cut off when printed
- spacing between the sides of the elements are inconsistent
- Elements found are missing main elements such as oxygen, helium & Hydrogen
